Description of Problem

Please include a detailed description of the issues, as well as a description of and a copy of any professional studies, citations or reports from government entities, recommended solutions, and any cost information or estimates. If additional space is needed, please attach.

In the interest of ensuring student safety, the Ajo High School and Ajo Elementary school which are housed on one campus with one school office, have the need for a new intercom system. Due to ground faults and age, we are not currently able to conduct a simple "lock down" drill via the use of the "all call" portion of our current intercom system. Of the 30 occupied classrooms over 10% of the rooms have failed intercom system connections. One classroom has no communication from the office to the classroom. That classroom can communicate to the office only. Additionally there are three elementary school classrooms in which there is no communication between the classrooms and the school office. This is via all call, or through contact attempts to individual classrooms. The school district has attempted to correct this safety issue on several occasions by hiring local contractors/repairmen to correct the problem. These actions have been unsuccessful.

Project Category: Special Systems
